# UNIFIED COMMUNICATION

Our platform includes integrated telephony, presenting a central phone book with visibility of all logged-in employees. This eliminates the need to memorize internal phone numbers or consult attendance lists. The platform displays the person's name, current status, and user role. Icons indicate availability, whether they are managing an alarm, currently on a call, or should not be disturbed.

Contact list

All important external phone numbers are readily available in the contact list, ensuring that employees can promptly connect with essential services, such as pharmacies or doctors. The platform also designates who is authorized to dial external phone numbers.
